Genes galore: a summary of methods for accessing results from
large-scale partial sequencing of anonymous Arabidopsis cDNA clones
Plant Physiol. 106, 1241-1255 (1994)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             /clone_lib="Lambda-PRL2"
/clone_lib="vector: lambda 2ip-Lox; Site_l: Sal; Site_2: Not; Inote="Vector: lambda 2ip-Lox; Site_l: Sal; Site_2: Not; Jubanda PRL2 is a cDNA library derived from equal cquantities of 4 pools of mRNA. The mRNA sources were 1) 7 day germinated eliolated seedlings; 2) tissue culture grown roots; 3) staged plants half with 24 hour light same plants as 3 but aerial issue (stems; flowers and siliques. The vector is BRL's lambda Zip-Lox. The cDNA inserts were directionally cloned with Sal-Not arms using

and products; all new functional assignments courtesy of Monica Riley; added promoters, protein binding sites, and repeated sequences described in reference 1. The unique numeric identifiers beginning with a lowercase by assigned to each gene (protein or RNA-encoding) are now designated as gene synonyms instead of labels. This should allow them to be searched for in Entrez as gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  /db_xref="PID:91787372"

Coli Genome Project at the University of Wisconsin-Madison (Frederick R. Blattner, director). Supported by NIH grants HG00301 and HG01428 (from the Human Genome Project and NCHGR). The entire sequence was independently determined from E. Coli K-12 strain MG1655. Predicted open reading frames were determined using GeneMark Software, Kindly Supplied by Mark Borodovsky, Georgia Institute of Technology, Atlanta, GA, 30332 [e-mail: mark@amber.gatech.edu]. Open reading frames that have been correlated with genetic loci are being annotated with CG Site: Nos., unique ID nos. for the genes in the E. coli Genetic Stock Center (CSCs) darabase at Yale University, Kindly supplied by Mary Berlyn. A public version of the database is accessible (http://cgsc.blology.yale.edu). Annotation of the genome is an ongoing task whose goal is to make the genome sequence more useful by correlating it with other data. Comments to the authors are appreciated. Updated information will be available at the E. coli Genome Project's World Wide Web site (http://www.genetics.wisc.edu). *** The E. coli K-12 sequence and its annotations are periodically updated; this is version MS4. No sequence changes. Annotation updates: updated gene identifications
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Blattner, F.R., Plunkett, G.                                                                                                                                                                                           NOTE: This is a 'working draft' sequence. It currently consists of 95 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  38614
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            39145
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               33817
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  41225
                                     * NOTE: This record contains 101 individual

* sequencing reads that have not been assembled into
configs. Runs of N are used to separate the reads
and the order in which they appear is completely
arbitrary. Low-pass sequence sampling is useful for
identifying clones that may be gene-rich and allows
overiap relationships among clones to be deduced.
However, it should not be assumed that this clone
* will be sequenced to completion. In the event that
the record is updated, the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       unknown length

The H. influenzae sequence has been updated by R. Fleischmann. New database matches have been assigned, product names have been improved, and a number of frame shifts have been corrected. We gratefully acknowledge the work of Tatusov et. al. We have incorporated their annotation into the /notes fields of the corresponding H. influenzae genes

Submitted (08-DEC-1999) Sanger Centre, Hinxton, Cambridgeshire, CB10 1SA, UK. E-mail enquiries: humquery@sanger.ac.uk Clone requests: Clonerequest@sanger.ac.uk

requests: Clonerequest@sanger.ac.uk

On Mar 28, 1998 this sequence version replaced gi:2558887.

During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with
                                                                                                                                                                                                                                                                                                                                      VVIGGKNSSVDAALELVKSGARVTVLYRGNEYSPSIKPWILPEFEALVRNGTIRMEFG

                                                                                                                                                                                                  The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

Em.; EMEL; Sw.; SWISSPROT; Tr.; TREMBL; Wp.; WORNEEP; Information on the WORNEEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 22, constructed by the Sanger Centre Chromosome 22 http://www.sanger.ac.uk/RGP/Chr22

ILIZ2NC03-113A11 is from the human chromosome 2-specific cosmid library LL22NC03. constructed at the Blomedical Sciences Division, Lawrence Livermore National Laboratory, Livermore, CA 94550 under the auspices of the National Laboratory Gene Library Project sponsored by the US Department of Energy. The source of the flow chromosomes was a human/hamster hybrid containing chromosomes 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 IMPORTANT: This sequence is not the entire insert of clone LL22NC03-113A11 It may be shorter because we only sequence overlapping sections once, or longer because we arrange for a small overlap between neighbouring submissions.

The true left end of clone LL22NC03-113A11 is at 1 in this sequence. The true right end of clone RPI-180M12 is at 100 in this sequence. The start of this sequence overlaps with sequence 282190 Location/Qualifiers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        /product="cn113A11.1 (KIAA0645)"

only a small overlap as described above.

This sequence has been finished according to sequence map criteria as follows. An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known annotated human repeat sequence elements (e.g. Alu). Where the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                // Anote="Alusx repeat: matches 1. .311 of consensus" 252. .2565 / Anote="Alusx repeat: matches 1. .312 of consensus" 2676. .2597 repeat: matches 1. .312 of consensus" 2676. .299 of consensus" 3015. .3179 / Anote="Alus repeat: matches 3. .127 of consensus" 3180. .3480 / Anote="Alusx repeat: matches 1. .301 of consensus" 3481. .3590 / Anote="Alusx repeat: matches 127. .243 of consensus" 3010(<3961. .4021,8202. .8284,8423. .9230) / Agene = ANI13A11.1"
